Aurus PhoneUP – IP Phone Lock Module

PhoneUP "Lock" module restricts access to IP Phone functions while its owner is away.

Phone Lock

When the IP phone is locked:

- the range of directions where a call can be made becomes limited (for example, only calls to internal phone numbers and emergency service numbers are allowed);
- access to services (personal phone directory, call history etc) is denied;
- incoming calls get transferred to the employee's mobile phone.

IP Phone Interface

The XML-service on Cisco IP phone allows user to lock the device with just one button and unlock it providing personal PIN code.

Master Code for Admin

Administrator uses master code to unlock any IP phone.

Automatic Lock/Unlock

IP phone may be locked/unlocked automatically when user logs in/out his PC (requires PhoneUP Agent to be installed).

Feature List

IP Phone lock features

- changing CSS for locked phone
