

Aurus PhoneUP – Cisco IP Phone Lock

PhoneUP Lock increases enterprise security and prevents unauthorized use of company phones.

Lock/Unlock easily

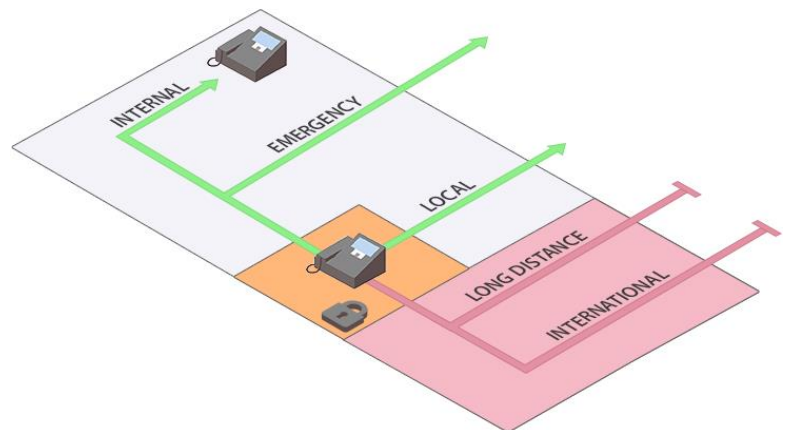

PhoneUP Lock works automatically – it tracks your Windows lock/login/logout events and changes your IP phone status accordingly.

You can also lock the phone manually with a single push of a button and unlock it with your personal PIN. The Master PIN is provided for admin to unlock any device.

Define security level

Configure the lock parameters to prevent unauthorized long-distance calls and secure your IP phones:

- define external routes to be blocked,
- list the emergency numbers to be always available for dialing,
- configure the mobile number to forward the incoming calls to.

Feature List

IP Phone lock features

- changing CSS for locked phone
- restricting access to personal data
- forwarding all calls to mobile
- XML-service to lock/unlock the device
- automatic locking/unlocking when user logs in/out his PC
